

Amasty Extension Installation Guide

for Magento 2.x

The logo for Amasty, featuring a large orange letter 'A' with a blue stylized 'm' integrated into its base, followed by the word 'masty' in a lowercase orange sans-serif font.

1. Unpack the extension ZIP file on your computer.
2. Connect to your website source folder with FTP/SFTP/SSH client and **upload all** the files and folders from the extension package to the corresponding **root folder** of your Magento installation:

Please use the “**Merge**” upload mode. Do not replace the whole folders, but merge them. This way your FTP/SFTP client will only add new files. This mode is used by default by most of FTP/SFTP clients software. For MacOS it's recommended to use Transmit. If you install several extensions from Amasty, they will contain same files from the Base package — feel free to overwrite them, these are system files used by all our extensions.

3. Connect to your Magento directory with SSH.

4. Run 3 following commands:

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

For more information on how to configure our Magento 2 extensions, please go to Amasty Knowledgebase:
